Dear Hiring Manager,

I am writing to express my interest in the AI Developer position at Coca-Cola HBC Egypt. As a Computer Engineering graduate from the AI Engineering Program at Alamein International University (GPA 3.58/4.00), currently continuing into an M.Sc. in Computer Science at the same institution, I am excited by the opportunity to contribute to a company investing so heavily in innovation and local manufacturing excellence in Egypt.

My graduation project, SekMed, gave me hands-on experience working with Large Language Models, and I separately built a Retrieval-Augmented Generation (RAG) application, integrating an LLM with a custom knowledge base to deliver accurate, context-aware responses. I have deployed and worked within the Microsoft Azure cloud ecosystem using a FastAPI backend, allowing me to move AI solutions from prototype to a scalable, production-ready environment — a combination I believe is directly relevant to Coca-Cola HBC's growing investment in AI and digital transformation through its Cairo Digital Hub.

I also developed a Microservices-Based Translation and Summarization Platform for English-Arabic text, building a modular architecture with FastAPI, Flask, and Django, and using Hugging Face Transformers for the underlying NLP tasks, with Kafka and Docker supporting the service communication and deployment layer.

My technical background also spans deep learning applied to real-world problems, including a kidney segmentation project combining 3D U-Net architectures with Swin Transformers, and a drone-based precision agriculture system using YOLOv8 and OpenCV for crop disease detection, built within a ROS/Gazebo simulation environment. I also have backend development experience with Laravel, which complements my ability to build and integrate AI-driven applications end-to-end.

Alongside my technical work, I currently serve as a part-time Teaching Assistant in the Faculty of Engineering at AIU, teaching Computer Architecture and Organization, Embedded Systems, and IoT. This role has sharpened my ability to break down complex technical concepts, manage projects under deadlines, and collaborate effectively with diverse teams — skills I look forward to bringing to Coca-Cola HBC's engineering environment.

I am based in Alexandria, close to Coca-Cola HBC's operations in the region, and I would welcome the opportunity to discuss how my background in AI/ML and software engineering can support your team's goals. My foundation in ML was also strengthened through the MCIT Digital Egypt Pioneers Initiative internship. Thank you for considering my application.

Sincerely,

Moaaz Mostafa Elsaid Elsaadny
